ACKNOWLEDGEMENTS

Numerous individuals contributed to this technically challenging and logistically complex archaeological project. First and foremost, thanks are offered to DKM Properties Corp. who funded these investigations and provided prompt and effective support at critical junctures during the work. In particular, the assistance and cooperation of Patrick J. Henry, Director of Urban Development, is acknowledged. Mr. Henry supplied project-related materials whenever requested and showed a keen interest in the progression of the work. Joseph Hodgson, the on-site Project Manager, also assisted us greatly with many of the practical problems that arose in carrying out an archaeological excavation indoors within an urban block immediately prior to its demolition.

Various State of New Jersey and City of Trenton officials helped guide our work through an accelerated schedule that saw three separate phases of archaeological fieldwork completed within a six-month period. The ready assistance of the Office of New Jersey Heritage (New Jersey Department of Environmental Protection), and specifically, Nancy Zerbe, Administrator, and Jonathan Gell, Archaeologist, was much appreciated. State-level reviews of the work in progress and of interim reports was greatly expedited through the efforts of these two individuals. The advice and assistance of Jerome Harcar and James Harveson of the City of Trenton Department of Housing and Development is also gratefully acknowledged.

The archaeological work benefited to no small degree from a free exchange of information with architectural historians and architects working on the Capital Center project. Janet Foster and Robert Craig of the historic architectural consulting firm Acroterion kindly shared with us the results of their endeavors, both during fieldwork and in the form of their completed report. While our and Acroterion's interpretations of the development sequence of the Trenton House property differ somewhat, we have made liberal use of their research materials for other portions of the Dunhams block. Their willingness to share information minimized duplication of research effort and spurred numerous productive discussions on the history of the block. John Clarke of the architectural firm of Clarke and Caton also kindly shared with us his considerable knowledge of the architecture of the Dunhams block and downtown Trenton.

Historical research for this project was performed by Richard Porter. Archaeological fieldwork was supervised by Richard Regensburg, Terrence Epperson and William Sandy under the overall direction of Richard Hunter. Lynn Rakos, Assistant Archaeologist, played a key coordinating role in the fieldwork and, with Richard Hunter, was responsible for analyzing the complex stratigraphy encountered on the site. Ioana Belcea, Carolyn Borchardt, Joseph Champion, Stephanie Crockett, Carl Dale, Edward Ellis, Joanne Galinis, Gregory Giacobe, Jack Goudsward, Robert Hamilton, Elizabeth Higginson, Steven Kaplan and Clare McDonough worked as field assistants. Laboratory analysis and inventorying of the large assemblage of artifacts recovered from the excavations were performed by Robert Cochrane with assistance from William Liebeknecht and Harriet Kronick. Drafting for this report was conducted by William Liebeknecht, Tee-Ann Hunter, Ernest Bower, Jean Nist Ferrara and Ioana Belcea. Cathie Burrow and Elizabeth Higginson were responsible for report assembly and administration of this project. This report has been co-authored by Richard Hunter and Richard Porter.
